PRESS RELEASE

SUMMIT ENVIRONMENTAL CONTRACTORS WINS SIX MILLION DOLLAR CONTRACT WITH SKANKSA USA CIVIL

November, 2021 Orange County California

Summit Environmental Contractors (SEC) will provide engineering support, statistical analysis, logistical services, transportation and disposal of over 108,000 tons of contaminated and hazardous material for the Alameda Corridor-East Project (ACE) Fullerton Road Grade Separation.

Skanska USA Civil (NYSE:SKA-B.ST) has awarded SEC a six million dollar contract for the Fullerton Road Grade Separation Project to provide plans, project oversight, mobilization and transportation & disposal of over 108,000 tons of contaminated and hazardous material. The work is scheduled to begin in the 4th quarter of 2021.

Partnerships like this keep sustainable infrastructure projects running smooth, on time, and within budget. For Corporations in time pressured industries, it is important to avoid expensive delays by planning for and mitigating environmental issues impacting construction. Dave Aronne from Summit says, “We are excited to support Skanska in its very important role in providing the ACE project with world class engineering and construction technology.”

The Fullerton Road Grade project is a \$144 million project that eliminates the existing at-grade crossing in the City of Industry crossing the Union Pacific Railroad (UPRR) Los Angeles Subdivision and Metrolink (Riverside Line) at UPRR milepost (MP) 21.43 through construction of a combination of railroad flyover and roadway underpass. A Railroad Street overcrossing and pedestrian bridge south of the railroad bridge will be constructed. The project would eliminate delays for emergency responders and crossing collisions. The project would also reduce emissions and improve regional air quality, eliminate locomotive horn and crossing bell noise and decrease idling automobiles stopped at the existing Union Pacific Railroad (UPRR).

Incorporated in the US since 1971 Skanska is one of the largest, most financially sound construction and development companies in the U.S., serving a broad range of clients including those in transportation, power, industrial, water/wastewater, healthcare, education, sports, data centers, government, aviation and commercial.

Summit Environmental Contractors is a leader in California’s sustainable green technology, known for their expertise in the transportation and disposal of contaminated and hazardous material. With a proven track record for over two decades Summit is a trusted green partner to many industry leaders.
