PRESS RELEASE

SUMMIT ENVIRONMENTAL CONTRACTORS AWARDED CONTRACT WITH FLATIRON WEST INC. FOR MORENA PUMP STATION PROJECT

December 2021- San Diego California

Summit Environmental Contractors (SEC) will provide project oversight including material Characterization, safety training, along with transportation and disposal of contaminated material in support of the City of San Diego Morena Pump Station Project.

Under the contract with Flatiron West Inc.

(NYSE:HOCFF) SEC will provide a broad range of intergraded logistics support and sustainment service, helping to modernize the pure water needs for the North City Water Reclamation Plant. The single award contract has a value of up to \$1.5 million.

“Summit Environmental Contractors past performance with Flatiron for more than 12 years demonstrates our ability to provide a full range of support and sustainment for modernization of infrastructure on water supply projects. We are incredibly proud and honored to continue this important work.” Says David Aronne CEO of SEC.

The Morena Pump Station and Pipelines project is a \$123 million enterprise designed to increase wastewater flows to the North City Water Reclamation Plant (NCWRP), which will require 52 million gallons per day of wastewater to meet both Pure Water and recycled water needs. A wastewater pump station will be built at the intersection of Sherman Street and Custer, near Morena Boulevard. Two wastewater pipelines will also be constructed: one pipeline will transport wastewater from the pump station to the NCWRP and one will transport salts and contaminants (brine) from the NCWRP to the Point Loma Wastewater Treatment Plant. This project will also include the construction of two water pipelines, a water distribution pipeline, and a water transmission pipeline, which will run parallel to the wastewater pipelines along West Morena Boulevard and Morena Boulevard.

Flatiron is a subsidiary of German-based HOCHTIEF, one of the world's largest international construction service providers. Flatiron is a critical infrastructure construction company that builds roads, bridges, rail, airports, dams, industrial, water and underground projects from common to complex, large-scale jobs. Delivering successful projects under a variety of contracting methods, they have unparalleled design-build and public-private partnership experience and expertise.

Summit Environmental Contractors is a leader in California's sustainable green technology. SEC offers solutions to the most complex environmental infrastructure modernization and sustainability challenges. Over the past two decades their experience has been the trusted choice for hundreds of Federal, State, and private sector projects in almost every facet of sustainable green technology.
