## **Contract Award**

### **SUMMIT ENVIRONMENTAL WINS CONTRACT WITH STACY AND WITBECK**

#### **For Caltrans in District 7 – Malibu, California**

Summit Environmental Contractors (SEC) will provide environmental contracting and consulting services along with the disposal and transportation of over 1,500 tons of contaminated soil for the California Department of Transportation (Caltrans) District 7. Stacy and Witbeck has awarded SEC a contract valued at \$190,000 to remove hazardous materials and complete preliminary work prior to replacing the existing bridge with a new and improved concrete bridge. The new bridge will be 105 feet wide by 240 feet long and feature: two 12-foot traffic lanes, northbound and southbound traffic will be separated by a six-foot striped median, new bike lane, separate pedestrian lanes and 10-foot shoulders in each direction to substantially improve efficiency and safety for the community.

By removing this hazardous material, Summit is preventing toxic waste from migrating into the groundwater and beaches, helping reduce carbon emissions, protecting construction workers from health hazards and creating a healthier community for families. The preliminary work Summit Environmental Contractors will be completing will also include air monitoring, waste characterization, health and safety training, engineer support and site management.

Stacy and Witbeck Inc. have proven themselves to be experts in the infrastructure modernization industry with over 40 years of experience and are featured in *ENR Magazine* as a premier construction company year in and year out. They are committed to sustainability at every level by minimizing their carbon footprint, implementing sustainable practices and like Summit, use innovative approaches to reduce waste and reuse materials.

“We are grateful for this opportunity to be the first step in creating a safer environment by contributing sustainability, green technology and to be part of the solution in helping reduce carbon emissions.” says CEO Dave Aronne of Summit Environmental Contractors (SEC).

Over the last 14 years, SEC has been at the forefront of aerially deposited lead removal and the protection of both the environment and our communities by providing sustainable green methods towards the modernization of the transportation in California.
